

Press Release 2015 NAMM Show Booth #2163 Hall D

January 2015

Rancho Cucamonga, CA – Among the many drum dampening products available on the market, DrumClip has emerged as a simple, clean, and affordable solution for drummers to effectively take control of their tone. The durable and unobtrusive design of the DrumClip gives drummers the focused response that they're after, while minimizing the unwanted frequencies.

In continuing with the success of the Regular DrumClip (for drum sizes 12" and larger) and the Small DrumClip (for drum sizes 12" and smaller), we've introduced the Bass DrumClip and the DrumClip Accessory Adapter into our lineup.

The Bass DrumClip utilizes the same durable design as the original, but in a larger size to accommodate standard bass drum hoops. Similar to the original design, the Bass DrumClip can be mounted on either the batter head or the resonant head.

The DrumClip Accessory Adapter, which made its debut at Winter NAMM 2014, employs the same patented attachment design as the rest of the DrumClip line, and gives drummers a clean and simple mounting solution for their compact video camera attachments, cellular device attachments, microphone clips, sheet music stands, and whatever else they would want to attach to their rims.

The entire DrumClip line is attractively priced for the consumer (\$6.49-\$7.99 for the Small, Regular, and Accessory Adapter, and \$7.49-\$8.99 for the Bass) while still maintaining great margins for dealers. DrumClip products are proudly manufactured in the U.S. and carry a lifetime warranty.
